SUMMARY

Graduate web developer (backend-leaning full-stack) specialising in TypeScript (Node/Express) and Python (FastAPI). I build secure, testable REST APIs and real-time features backed by PostgreSQL/MongoDB, ship with Docker, and work well in Agile teams. Currently expanding Go (Gin).

SKILLS

- **Languages:** TypeScript, JavaScript, Python, Go
- **Backend:** Node.js (Express), FastAPI, REST APIs, WebSockets
- **Frontend:** React, TailwindCSS
- **Data:** PostgreSQL, MongoDB, SQL
- **DevOps/Quality:** Docker, Git, TDD/BDD
- **CI/CD:** GitHub Actions
- **Testing:** Jest, PyTest

PROJECTS

MoviePad

Tech Stack: React, Tailwind CSS, Redux, FastAPI, Node.js, Express, PostgreSQL, MongoDB, JWT, Docker

GitHub: <https://github.com/Kaialogen/Movie-Pad>

A full-stack demo movie rental platform developed as part of a group project at university. Designed with a focus on usability, microservices, and secure user authentication.

- Led frontend development with React, TailwindCSS, and Redux, creating an intuitive interface for browsing, renting, and managing movies.
- Built dynamic user flows including movie catalogues, individual movie pages, shopping cart, and checkout functionality.
- Implemented JWT auth with refresh tokens, protected routes, and secure password encryption.
- Built backend as two services (FastAPI: catalogue; Express: auth) with clear contracts and typed DTOs.
- Designed PostgreSQL schema for users/auth and MongoDB models for catalogue; added indexes and pagination for responsive queries under load.
- Containerised services with Docker Compose; local dev parity, .env-driven config, health checks.
- Team of four using Agile cadences; led frontend; drove PR reviews and standards.

Hurst Chat

Tech Stack: Node.js, Express.js, PostgreSQL, Docker, JWT, REST API, Git, React, Tailwind CSS

GitHub: github.com/Kaialogen/Hurst-Chat

A full-stack social messaging platform, with a focus on secure, scalable backend architecture.

- Designed and implemented RESTful APIs using Express.js and Node.js to handle user authentication, messaging, and session management.
- Integrated JWT-based authentication and secure password hashing to ensure data privacy and account protection.
- Utilised PostgreSQL to model relational data for users, chats, and messages, enforcing referential integrity.
- Containerised the application using Docker to streamline development and deployment workflows.
- Built a responsive frontend with React and Tailwind CSS, enabling real-time messaging and dynamic user interaction.
- Used Git for version control and collaboration, following best practices for branching and commits

WORK EXPERIENCE

Forvis Mazars LLP

July 2023 - August 2023

Cyber Attack and Defence Internship

- Collaborated on four pentesting projects, including IoT firmware analysis and malware evasion in Go.
- Wrote TDD-style unit tests and integrated checks into Git-based reviews; reduced regressions.
- Delivered internal tooling/docs; presented findings to stakeholders, aligning security with engineering priorities.
- Collaborated in an Agile Scrum team, contributing to sprint planning, stand-ups, and reviews.

EDUCATION

WMG, University of Warwick

September 2021 - July 2024

BSc Cyber Security

Achieved Upper Second Class

Modules Studied include: Data Structures and Algorithms, The Cyber Context of Software Engineering, Programming Languages for Cyber Security, Implementing Secure Systems, Networks & Cyber Defence.

Hurstpierpoint College

September 2019 - July 2021

A-Levels

A*, A* ,A, B- Geography, Business Studies, Computer Science, EPQ.
